Andrea Salemi

Full-Stack Software Engineer | TypeScript, React, Svelte, Node.js
Turin, Italy | andrea.salemi99@hotmail.com
github.com/andrewSalemi | linkedin.com/in/andrea-salemi-87b8141bb

Summary

Full-Stack Software Engineer with 5+ years of experience building production web and cross-platform mobile applications in TypeScript: React, Next.js, Svelte, SvelteKit and Node.js (Fastify, NestJS) with REST APIs, WebSockets and PostgreSQL. Led a 15-person Frontend team and a 4-person UX/UI team in establishing a Figma-to-code design system (shadcn/ui) now used in every company project. Built a real-time B2B auction platform for 1K-5K users, cut load times of 2-5 GB BIM models by 80%, and led a Magento 2 to Shopify migration as Technical Lead. Works with agentic coding (Claude Code, multi-agent workflows).

Technical Skills

Programming Languages: TypeScript, JavaScript, SQL
Frontend: React, Next.js, Svelte, SvelteKit, TanStack Start, TanStack Router, TanStack Query, Tailwind CSS, HTML, CSS, Vite
Backend: Node.js, Fastify, NestJS, REST APIs, OpenAPI/Swagger, WebSockets, Microservices, Zod, Stripe
Databases: PostgreSQL, MongoDB, Drizzle ORM
AI-Assisted Development: Claude Code, agentic coding, multi-agent workflows, custom skills and rules
Design Systems: shadcn/ui, Figma, component-driven development
Cloud & Tools: Docker, AWS CDK, Git
Testing: Vitest, Cucumber (BDD), Storybook
Mobile & 3D: React Native, Capacitor (iOS, Android), Three.js, Threlte, IFC/BIM
Web3: VeChain, Base (Ethereum L2), smart contract integration
E-commerce: Shopify, Shopify Flow, Shopify Messaging, Matrixify, Magento 2

Experience

Efebia | *Software Engineer*
Oct 2021 - Present | *Remote, Italy*
Clients include VeChain Foundation. Rejoined in 2025 after six months at Orbyta (Dec 2024 - May 2025).

- Led the Frontend team (15 people) and the UX/UI team (4 people) in establishing a unified design system between Figma and the frontend codebase, built on shadcn/ui and its component-driven approach; adopted by every company web and mobile project since its introduction.
- Adopted agentic coding with Claude Code, using multi-agent workflows plus custom skills and rules to steer the models toward the best output, keeping code-review time low and shipping correct code to production faster.
- Built standardized frontend project templates on TanStack Start (React) and SvelteKit, used by every company project since their introduction, reducing cognitive load when developers move between projects.
- Used Docker, OpenAPI/Swagger and Zod across all Efebia projects for containerized environments, documented APIs and runtime schema validation.

Magento to Shopify Migration - J-POP Manga & Edizioni BD | *Technical Lead*
Shopify, Shopify Flow, Shopify Messaging, Matrixify, Magento 2

- Led the Magento 2.4.1 to Shopify migration of two e-commerce stores, from the technical implementation plan through Matrixify data imports to go-live in October 2026.
- Designed a product tag taxonomy that powers site search and doubles as a customer segmentation engine through Shopify's native segments, reducing reliance on paid marketing tools.
- Designed email automations with Shopify Flow and Shopify Messaging for ~19,000 customers; recommended a native setup at ~$26/month for both stores vs. $180-230/month for premium platforms (~86-89% lower cost).

B2B Vehicle Auction Platform & CMS | *Full-Stack Engineer*
TypeScript, React 19, TanStack Query, Fastify 5, Drizzle ORM, PostgreSQL, WebSockets, Stripe, AWS CDK

- Built a TypeScript monorepo with a Fastify 5 REST API on Drizzle ORM and PostgreSQL, plus React 19 SPAs for dealers, buyers and the admin CMS, serving a B2B user base of 1,000-5,000 users.
- Optimized API calls with TanStack Query and a smart cache-invalidation system, reducing redundant network requests.

- Implemented live ascending auctions over WebSockets with anti-sniping extensions, an event-driven auto-bid engine using PostgreSQL row locking (FOR UPDATE SKIP LOCKED) and post-auction reserve negotiations.
- Built the admin CMS for dealer approvals, vehicles, auctions and analytics, with CASL role-based access control (RBAC), a Lexical rich-text editor, Recharts dashboards and Paraglide i18n.
- Integrated Stripe payments, TeamSystem IDSign e-signatures and Motornet vehicle data; covered the code with Vitest, Cucumber (BDD) and Storybook tests.

Decentralized Music Platform (Web3, Base L2) | *Lead Frontend Developer*
TypeScript, SvelteKit

- Architected and led frontend development of a DeFi platform that removes intermediaries from the music industry, including the Web3 user experience for smart contract interactions; the project raised $1M at a $19.37M valuation.

Zipaki - Comics & Manga Reader App (zipaki.com) | *Frontend App Developer*
TypeScript, SvelteKit, Capacitor

- Implemented the full frontend architecture for every user flow in the app: community, discovery and in-app purchases.
- Built a download service that handles every download state, so users can always find and read downloaded content.
- Shipped a near-native experience on iOS and Android from a single web codebase with Capacitor.

Checksig - Crypto Asset Management App | *Frontend App Developer*
TypeScript, Svelte, Capacitor

- Built a data visualization system to track and analyze crypto asset values against current market prices.
- Implemented the full frontend architecture for asset transfers, swaps and receipt management, on web and on iOS/Android.

EcoMeal - Mobile App for VeChain
Svelte, React Native

- Migrated the EcoMeal app for VeChain from a Svelte codebase to React Native, converting its screens and components to a React Native mobile app.

vorj.io - Web3 No-Code Platform | *Frontend Engineer*
React, Next.js, TypeScript

- Designed and enforced role-based access control (RBAC) for sensitive operations.
- Implemented real-time features with WebSockets and pub/sub patterns.

Company website & community

- Architected the Efebia company website with motion design and interactive 3D models built with Threlte (Three.js for Svelte), and built landing pages for VeChain partner events and contests.

Orbyta | *Software Engineer*
Dec 2024 - May 2025 | *Hybrid, Turin, Italy*
TypeScript, SvelteKit, NestJS, MongoDB, PostgreSQL, WebSockets

- Built a SvelteKit frontend that renders 3D IFC (Industry Foundation Classes) models for construction project management, enabling advanced BIM (Building Information Modeling) visualization and interaction.
- Designed and implemented a NestJS service that distributes 2-5 GB IFC models through both optimized streaming and full-file delivery.
- Integrated model-preprocessing pipelines that, combined with streaming, cut model load times by 80% while guaranteeing compatibility and accurate web-based rendering.
- Implemented real-time WebSocket communication (pub/sub) on backend and frontend to track remote model-processing progress, and enforced role-based access control for IFC projects and files.

Education

Bachelor of Science in Computer Science | *University of Turin*
2019 - 2022 | *Turin, Italy*
Final grade: 103/110

Languages

Italian: Native
English: B2 (Upper-intermediate)
